

a Event model

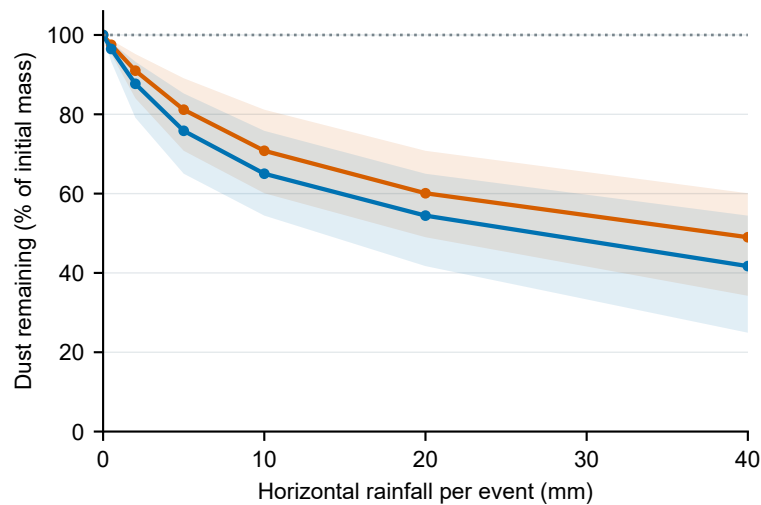

b Received rain / horizontal rainfall

c Loose dominated · f = 0.20

d Adhered dominated · f = 0.70

c-d: easterly rain, horizontal 3 m/s / downward 5 m/s. Bands: assumed wash-off coefficients $\times 0.5$ –2; not confidence intervals.

Hypothetical coefficients $k_l = 0.25$ and $k_b = 0.015 \text{ mm}^{-1}$. Initial dust is controlled, not predicted. No PV power loss is inferred.
